■ ExamVault

Powered by Haari_Codes ■■■

ExamVault is a student-focused web application for finding, filtering, viewing, and downloading previous year question papers.

1. Project Overview

ExamVault provides a simple and responsive interface where students can search question papers by subject and filter them using university, semester, and year. The project is designed to make exam preparation easier by keeping previous year papers and important questions in one place.

2. Main Features

Feature	Description
Search	Search question papers by subject or paper name.
University Filter	Filter papers by Calicut University or KTU.
Semester Filter	Filter papers from Semester 1 to Semester 8.
Year Filter	Filter papers from 2020 to 2026.
Question Paper Cards	Displays subject, university, semester, year and paper code.
View Paper	Opens an uploaded PDF in a new browser tab.
Download PDF	Allows available PDF papers to be downloaded.
Important Questions	Shows selected important questions for students.
Responsive Design	Adapts the layout for mobile and desktop screens.

3. Technologies Used

• **HTML5** – Used to create the structure and content of the website.

• **CSS3** – Used for styling, responsive layout, colours, cards, buttons and visual design.

• **JavaScript** – Used for searching, filtering, displaying papers and handling PDF actions.

• **GitHub** – Can be used to store the project files and publish the website using GitHub Pages.

4. Project Structure

index.html – Main webpage containing HTML, CSS and JavaScript.
README.pdf – Documentation describing the project.
PDFs/ – Recommended folder for storing the actual question paper PDF files.

5. Adding Question Papers

Question papers are stored in the JavaScript **papers** array. Each paper contains the subject, university, semester, year, code and PDF path.

Example:

```
{
  subject: "Software Engineering",
  university: "Calicut University",
  semester: "S3",
  year: "2025",
  code: "SE301",
  pdf: "PDFs/SE301_2025.pdf"
}
```

6. GitHub Upload Structure

```
ExamVault/
■■■ index.html
■■■ README.pdf
■■■ PDFs/
    ■■■ SE301_2025.pdf
    ■■■ STLD301_2024.pdf
    ■■■ ...
```

7. How the Website Works

When the website loads, JavaScript displays all available question papers. When a student enters a search term or selects a filter, the **showPapers()** function filters the paper database and updates the cards. The View Paper button opens the PDF when a valid PDF path is available. The Download PDF button is enabled only when a PDF has been added.

8. Future Enhancements

• Add more universities and colleges.

• Add more subjects, semesters and years.

• Add administrator functionality for uploading papers.

• Add user login and student accounts.

• Add bookmarks or favourites for important papers.

• Add online question-paper previews.

• Add a database for storing papers instead of a static JavaScript array.

9. Conclusion

ExamVault is a simple and useful academic resource platform designed to help students prepare for examinations. By combining search, filtering and question-paper access in one responsive website, the project provides a convenient way to find previous year papers and important questions. The project can be expanded in the future with a database, administrator panel, user accounts and additional academic resources.
